1. Conceituação

Friendship arises out of mere Companionship when two or more of the companions discover that they have in common some insight or interest or even taste which the others do not share and which, till that moment, each believed to be his own unique treasure (or burden). The typical expression of opening Friendship would be something like, 'What? You too? I thought I was the only one'."

Abstract

[Go to:](#) ☒

Objectives. To test the hypothesis that violence among US adolescents spreads like a contagious disease through social networks.

Methods. Participants were a nationally representative sample of 90 118 US students aged 12 to 18 years who were involved in the National Longitudinal Study of Adolescent Health. Violence was assessed by having participants report the number of times in the preceding 12 months they had been involved in a serious physical fight, had hurt someone badly, and had pulled a weapon on someone.

Results. Participants were 48% more likely to have been involved in a serious fight, 183% more likely to have hurt someone badly, and 140% more likely to have pulled a weapon on someone if a friend had engaged in the same behavior. The influence spread up to 4 degrees of separation (i.e., friend of friend of friend of friend) for serious fights, 2 degrees for hurting someone badly, and 3 degrees for pulling a weapon on someone.

Conclusions. Adolescents were more likely to engage in violent behavior if their friends did the same, and contagion of violence extended beyond immediate friends to friends of friends.

Discussão

- O espalhamento de comportamento violento em redes sociais já é estudado extensivamente e comprovado
- Há uma grande oportunidade para o uso das estruturas das redes sociais para favorecer comportamentos desejáveis e eliminar comportamentos indesejáveis
- Políticas públicas de direitos humanos baseadas em contágio social em redes sociais já são áreas de exploração em projetos da UE, e merecem atenção também no Brasil

Sobrou um tempinho?

I have received **no assurance** that anything we can do will eradicate suffering. I think the best results are obtained by people who work quietly away at limited objectives, such as the abolition of the slave trade, or prison reform, or factory acts, or tuberculosis, not by those who think they can achieve universal justice, or health, or peace. I think the art of life consists in tackling each immediate evil as well as we can.

— C.S. Lewis
