2026 Technology and the Human Person in the Age of AI

Baylor Symposium on Faith and Culture, Institute for Faith and Learning, Baylor University

The rapid advance of Artificial Intelligence (AI) has ushered in an era of unprecedented technological innovation. This revolution presents both remarkable opportunities and complex challenges for human flourishing. Institutions across all sectors—educational, ecclesial, commercial, and political—are already experiencing the disruptive and generative power of this transformative technology. The very power of AI to transform also carries the risk of unforeseen consequences, raising profound ethical and societal questions.

Standing at the intersection of unprecedented possibility and profound uncertainty, how do we equip our communities to engage with AI in a manner that is both morally grounded and conducive to human flourishing? This conference convenes theologians, technologists, scientists, administrators, ethicists, and educators to grapple with such critical questions, and we invite you to explore the responsible use of technology in the age of AI and the nature of the human person.
