Welcome

I investigate the spread of opinions, sentiments, and behaviors in complex systems through multiagent modeling and simulations, offering insights into social dynamics in politics, cooperation, health, criminology, and religion.

The work I develop is multidisciplinary, using agent-based models and data science to solve problems in areas such as political polarization in churches, public security, the spread of fake news, and promoting healthier lifestyles.

Education

Ph.D. **Vrije Universiteit Amsterdam**, Computer Science — Amsterdam, NL
- Thesis: Contagious: Modeling the Spread of Behaviours, Perceptions and Emotions in Social Networks

Aug 2014 – Sept 2018

M.Sc. **Universidade Federal de Minas Gerais**, Computer Science — Belo Horizonte, Brazil
Mar 2007 – Sept 2009

B.Sc. **Universidade Federal de Viçosa**, Computer Science — Viçosa, Brazil
Mar 2003 – Dec 2006

Experience

Calvin University, Associate Professor — Grand Rapids MI USA
- Computer Science Department Calvin University

July 2024 – present
2 years 4 months

FIOCRUZ, Researcher — Rio de Janeiro Brazil
- FIOCRUZ is a leading institution in health research and development in Brazil. My work focused on collecting data and analyzing it to understand medical circulation of health sciences among Brazilian researchers.

Jan 2022 – Jan 2024
2 years 1 month

Vrije Universiteit Amsterdam, Guest Researcher — Oct 2018 – Apr 2022
- Collaborator in the Department of Computer Science Vrije Universiteit Amsterdam
- Worked on criminology models with Prof. Dr. Charlotte Gerritsen.

3 years 7 months

Universidade Federal de Lavras, Associate Professor — Minas Gerais Brazil
- Computer Science Department Universidade Federal de Lavras

Feb 2011 – June 2024
13 years 5 months

Gammon Presbyterian Faculty, Professor — Minas Gerais Brazil
- Professor and Coordinator of the Information Systems course

Jan 2010 – Jan 2011
1 year 1 month

Books

Revisiting AI Ethics: A Practice-Grounded Approach for Development, Implementation and Policy Making — In preparation
Maarten Verkerk, Christine Boshuijzen-van Burken, **Eric Araújo**
(Springer. In preparation (under contract with Springer). Provisional title. Applies Dooyeweerd's modal framework to the ethics of artificial intelligence.)

Publications

Brasil nas redes globais de pesquisa em Ciências da Vida e da Saúde: liderança dependente do contexto (2010–2019) — Sept 2026

Social Connection Dynamics in a Health Promotion Network Jan 2017
Eric Araújo, Michel Klein, Aart van Halteren
10.1007/978-3-319-50901-3_61 (Complex Networks & Their Applications V)

Explaining Changes in Physical Activity Through a Computational Model of Social Contagion Jan 2017
Julia S. Mollee, **Eric Araújo**, Adnan Manzoor, Aart T. van Halteren, Michel Klein
10.1007/978-3-319-54241-6_19 (Complex Networks VIII)

Exploring Parameter Tuning for Analysis and Optimization of a Computational Model Jan 2017
Julia S. Mollee, **Eric Araújo**, Michel C. A. Klein
10.1007/978-3-319-60045-1_36 (Advances in Artificial Intelligence: From Theory to Practice)

A Temporal-Causal Model for Spread of Messages in Disasters Jan 2017
Eric Araújo, Annelore Franke, Rukshar Wagid Hosain
10.1007/978-3-319-67077-5_37 (Computational Collective Intelligence)

A Computational Cognitive Model for Political Positioning and Reactions in Web Media Jan 2017
Eric Araújo, Michel Klein
10.1109/ICCI-CC.2017.8109782 (2017 IEEE 16th International Conference on Cognitive Informatics & Cognitive Computing (ICCI*CC))

Analysis and Refinement of a Temporal-Causal Network Model for Absorption of Emotions Jan 2016
Eric Araújo, Jan Treur
10.1007/978-3-319-45243-2_3 (Computational Collective Intelligence)

Online Sharing of Physical Activity: Does It Accelerate the Impact of a Health Promotion Program? Jan 2016
Adnan Manzoor, Julia S. Mollee, **Eric Araújo**, Aart T. van Halteren, Michel C. A. Klein
10.1109/BDCloud-SocialCom-SustainCom.2016.40 (2016 IEEE International Conferences on Big Data and Cloud Computing (BDCloud), Social Computing and Networking (SocialCom), Sustainable Computing and Communications (SustainCom) (BDCloud-SocialCom-SustainCom))

Analysis and Evaluation of Social Contagion of Physical Activity in a Group of Young Adults Jan 2015
Eric Araújo, Anita V. T. T. Tran, Julia S. Mollee, Michel C. A. Klein
10.1145/2818869.2818922 (Proceedings of the ASE BigData & SocialInformatics 2015)

An Analysis of TCP Protocol Issues in Asymmetric Networks and Existing Solutions (*In Portuguese*) - M.Sc. Thesis Jan 2009
Eric Araújo
hdl.handle.net/1843/BUBD-9JWQ36 (Universidade Federal de Minas Gerais)

AnimEasy: Free Tool for Digital Inclusion Focused on Multimedia Using Inkscape (*In Portuguese*) - B.Sc. Senior Project Jan 2007
Eric Araújo, Ricardo dos Santos Ferreira
(VII Simpósio de Informática do Planalto Médio (SIPM 2007))

Events

Wisdom in the Age of AI Conference — Church track Calvin University, Grand Rapids, MI Oct 2026
"Modeling Communities in Peril: Polarization and the Changes in the Social Fabric of Congregations through an Agent-Based Approach." Read paper on the BBB (Belief, Behavior, Belonging) agent-based model of congregational polarization, with the Brazilian and US context for church fragmentation.

CompCOVID 2020 Brazil (online) June 2020
Panel on computing applications during the COVID-19 pandemic. In Portuguese.

IX Brazilian Workshop on Social Network Analysis and Mining (BraSNAM 2020) Brazil (online) Dec 2020
Conference presentation of BraSNAM 2020 paper (doi:10.5753/brasnam.2020.11170).

Saúde Única — UFLA Lavras, Brazil (online) Feb 2021
Talk on opinion contagion in social networks and its epidemiological impact. In Portuguese.

ABC²-Tec 5ª Reunião — Associação Brasileira de Cristãos na Ciência Brazil (online) July 2021
Talk on social contagion models at the Brazilian Association of Christians in Science. In Portuguese.

KDMiLe 2021 — Symposium on Knowledge Discovery, Mining and Learning Brazil (online) Oct 2021
Keynote session (KSN2) at KDMiLe 2021. In Portuguese.

PROCORES Research Group Brazil (online) Dec 2022
Research group talk on social network spreading models. In Portuguese.

Oficina Prograd — UFLA — Lavras, Brazil
Workshop on AI tools for undergraduate education. In Portuguese. — Mar 2024

Departamento de Estatística — UFLA — Lavras, Brazil
Invited talk on data-driven agent-based modeling. In Portuguese. — Oct 2024

19º Congresso Brasileiro de Sistemas (CBS) — Goiânia, Brazil
In Portuguese — Nov 2024

Autonomous Agents for Social Good (AASG) 2025 — Detroit, MI
Presented by students Daniel Kwon and Jaden Brookens (senior project) — May 2025

Algoritmos e Sociedade — UFG — Goiânia, Brazil
In Portuguese — May 2025

INSNA Sunbelt 2025 — Paris, France
With Juliana Freitas Lopes et al. (Fiocruz) — June 2025

American Scientific Affiliation (ASA) Annual Meeting 2025 — Colorado Christian University, Lakewood, CO, July 2025

Grace Hopper Celebration 2025 — Chicago IL USA, Nov 2025
The Grace Hopper Celebration is the world's largest gathering of women in computing. Attended with the Calvin Girls Who Code student delegation.

Baylor Symposium on Faith & Culture 2026 — Technology and the Human Person in the Age of AI — Waco, TX, Feb 2026
"Cognitive Modeling of Christian Communities: Developing Intelligent Agents to Address the Polarization Effects in Churches." Session "AI and Relationships in Workplace Communities" (chair: Tiffany Flood), Baines, Bill Daniel Student Center, February 26, 2026, 12:00–1:30 p.m.

NetLogo Conference 2026 — Chicago, IL
Presented by students Katelin Jandris, Ryan Klein, and Övgü Tufan (senior project) — July 2026

Prompted: Liberal Arts in the Age of AI — Season 2, Episode 6 — Calvin University (podcast), Aug 2026
Podcast guest, discussing the Matristics summer research on what leading large language models know about two fourth-century Christian women, and previewing the October 8–10 "Wisdom in the Age of AI" conference. Hosted by Craig Mattson; production funded by the Calvin Center for Christian Scholarship.

American Academy of Religion (AAR) Annual Meeting 2026 — History of Christianity Unit — Denver, CO, Nov 2026
Papers session "History of the Present, the Futures of Christianity's Past" (A23-217), Monday Nov 23, 12:30–2:30 PM. Empirical evaluation of LLM accuracy on Macrina the Younger and Olympias of Constantinople.

Grants and Fellowships

Templeton World Charity Foundation — Planning Grant — June 2026 – Jan 2027
$100,000 planning grant for a research program on polarization and listening across communities, awarded under the Templeton World Charity Foundation's Listening and Learning in a Polarized World (LLPW) program and co-led with Dr. Damaris Parsitau. Extends the BBB (Belief, Behavior, Belonging) agent-based modeling work to congregations in Brazil and Kenya, with ethnographic fieldwork preceding the computational modeling. Full implementation proposal due January 15, 2027.

Marjorie G. Hoogeboom Student Faculty Research Fellowship Summer 2026
Inaugural award of the Hoogeboom fellowship, supporting a 10-week summer research placement for student David Quinn on the empirical validation track of the TWCF church-polarization project: survey-data pipelines for initializing agent belief distributions, calibration targets drawn from the social science literature, and support for the international pilot survey instruments.

Calvin Research Fellowship 2026 – 2027
Awarded 4 faculty load hours for the 2026–2027 academic year for the project "Modeling Political and Religious Polarization in Christian Communities." Named a Diekema Fellow, with support paid through the Diekema Endowment.

Nagel Institute Fellowship Jan 2026
Supporting research on computational modeling of world Christian communities.

McGregor Summer Research Fellowship May 2026 – Aug 2026
Supporting collaborative faculty-student research.

Teaching

Introduction to Data Structures Calvin University USA
An introduction to data structures and algorithms, focusing on the design and analysis of algorithms, data structures, and their applications. Sept 2024 – present

Databases Management Systems Calvin University USA
An introduction to database management systems, covering data modeling, query languages, and database design. Jan 2025 – present

Agent-based Modeling Calvin University USA
An introduction to agent-based modeling, focusing on the design and implementation of agent-based models for complex systems. Sept 2024 – present

Concepts of Programming Languages Calvin University USA
Concepts and paradigms of programming languages. Jan 2026 – present

Research Projects

Matristics: Evaluating Large Language Models on the Women of the Early Church Calvin University
With D. Rylaarsdam. Supported by a McGregor Undergraduate Research Fellowship. 2026 – present
- A public benchmark testing whether leading large language models (Claude, ChatGPT, Gemini, Grok) reproduce the androcentric silences of the historical record about women in early Christianity.
- First paper accepted to the American Academy of Religion Annual Meeting 2026.

CS Prayers — A Book of Hours for Computing Calvin University
Founder and curator. 2026 – present
- A public collection of liturgies for the rhythms of studying, teaching, and practicing computer science, open to contributions from students and faculty at any institution.

Procores UFMG Brazil

Research group funded by CNPq (Brazil) May 2022 – present

- ProCoReS is a research group funded by CNPq, dedicated to the study of social networks, mathematical modeling, contagion processes, and the analysis of complex data. The group brings together researchers from different fields to propose and analyze innovative models that consider multiple aspects of social networks and their dynamics.
- To model networks and contagion, most current approaches use graphs. However, these are not entirely realistic, and new models of contagion processes should allow for: representation of different classes of individuals and connections, linkage between concurrent and co-occurring processes, and connections involving two or more individuals simultaneously. Understanding how connections are formed and how different types of flows permeate such networks is crucial to understanding how our society is organized and evolves. The goal is to propose mathematical, statistical, agent-based, and machine learning models that account for: multiple complex aspects of social contagion processes and parameterization through data sources (e.g., online social networks, mobility, collaborations). Such models should allow for classes of individuals and relationships; model co-occurrence, causality, and links between contagion processes; and represent multi-relationships.
- Funded by: CNPq Universal 2022

Socioeconomic Impacts in Territories Affected by Technological Disasters UFLA Brazil

Sept 2022 – Feb 2024

- This project investigates the socioeconomic consequences of technological disasters in Brazil, which have increased significantly in recent decades. Between 2000 and 2020, Brazil recorded 96 technological disasters—ranging from dam collapses to oil spills—impacting over 42 million people and causing over USD 17 billion in damages (EM-DAT, 2021). Unlike natural disasters, which occur without human interference, technological disasters result from anthropogenic actions, such as industrial accidents or environmental contamination. These events often lead to material loss, environmental degradation, and serious public health issues, demanding robust mechanisms for community response and risk management.
- By analyzing historical data and specific case studies such as the Mariana (2015) and Brumadinho (2019) dam collapses, the project seeks to understand how these disasters affect the social and economic fabric of impacted territories. The ultimate goal is to identify patterns and develop frameworks that can inform policies for disaster prevention, mitigation, and recovery—contributing to more resilient communities in the face of growing technological risks.

Analysis of User Behavior on a University Campus Wi-Fi Network UFLA Brazil

Masters Project by Thiago do Prado Ramos Mar 2021 – Sept 2023

- This project aims to analyze the behavior of users on a university campus Wi-Fi network, focusing on connection patterns and user mobility. By examining connection logs, the project seeks to understand how users interact with the network, their mobility patterns, and how these factors influence network performance and user experience.
- The findings will help in optimizing network infrastructure, improving user experience, and informing future network design and management strategies.

Algorithms for the Optimization of Supply Chain Management Systems UFLA Brazil
Project in partnership with Prof. Mayron Moreira (UFLA Brazil) Mar 2021 – Mar 2022

- This project developed and evaluated algorithms aimed at optimizing key components of supply chain management, including inventory control, logistics, and production scheduling. By modeling supply chains as dynamic systems, the project applied heuristic and metaheuristic approaches—such as genetic algorithms and simulated annealing—to improve efficiency, reduce costs, and enhance decision-making under uncertainty.
- The research focused on real-world constraints such as demand variability, delivery time windows, and resource limitations. The resulting algorithms demonstrated significant improvements in performance when compared to traditional methods, and provided a flexible framework that can be adapted to various industrial sectors seeking to enhance their operational processes.

Urban Tree Cover and Crime UFLA Brazil
Project in partnership with Prof. Michele Valquíria dos Reis (UFLA Brazil) Mar 2020 – Mar 2024

- Urban tree cover provides vital ecosystem services that promote public health and well-being. However, there is a common perception—found in media reports and informal discussions—that trees may facilitate crime by obstructing visibility or serving as hiding places. While some studies have linked vegetation to fear of crime, often recommending vegetation removal to improve safety, research from the Northern Hemisphere increasingly suggests a negative correlation between urban greenery and crime rates, indicating that vegetation may actually contribute to crime reduction.
- This project aims to investigate the relationship between urban tree cover and crime incidence in Brazilian cities. It integrates data from street tree inventories, georeferenced crime records from the Military Police, socioeconomic indicators from the national census (IBGE), citizen surveys on perceptions of vegetation and safety, and citizen requests for tree removal. The goal is to generate scientific insights into the social dimensions of urban greenery and to inform evidence-based environmental management policies. The findings are intended to support public agencies and civil society in designing safer, greener urban spaces.

Computational Modeling and Simulation of Contagion in Social Networks UFLA Brazil
Sept 2018 – June 2024

- Social contagion refers to the spread of behaviors, perceptions, and emotions through interactions among individuals. Often occurring unconsciously, this phenomenon plays a role in shaping collective opinion, promoting positive behaviors, and influencing public discourse. This project aims to simulate the diffusion of information originating from social media platforms across various contexts, using agent-based and network modeling approaches.
- The study investigates how network topology, individual agent characteristics, and intervention strategies affect the spread and quality of information. It explores methods for enhancing the visibility and influence of high-quality content while limiting the reach of misinformation or fake news. The results aim to inform the design of healthier and more reliable information ecosystems, with potential applications in communication policy, platform design, and digital education.

Supervised Students

Miriam Crisman Calvin University
B.S. - Computational Modeling of Political Polarization in Complex Systems Fall 2026 - Spring 2027

- Senior Project

Adam Byle, Alayna Smith Calvin University
B.S. - Data-Oriented Agent-Based Model of Polarization and Fracture in Kenyan Society Fall 2026 - Spring 2027

- Senior Project

Sally Amonoo-Mensah — Calvin University
B.S. - What Is AI Saying about Junia? — Fall 2026 - Spring 2027
- Senior Project

David Quinn — Calvin University
B.S. - Empirical Validation and Data Pipelines for an Agent-Based Model of Church Polarization — Summer 2026
- Marjorie G. Hoogeboom Student Faculty Research Fellowship

Miriam Crisman — Calvin University
B.S. - NetLogo Agent-Based Model of Church Community Polarization — Summer 2026
- Part of the Templeton World Charity Foundation planning grant (Listening and Learning in a Polarized World)

Brady Swiech, Tim David, Zach Redder — Calvin University

B.S. - Webometria e Análise de Impacto da Informação em Redes Sociais

Paulo Roberto de Almeida — Federal University of Lavras (UFLA) — Brazil, Jan 2011
B.S. - Validação do Modelo Matemático para a Análise do Comportamento do Protocolo TCP em Redes Assimétricas

Karen Aline Alves Bezerra — Federal University of Lavras (UFLA) — Brazil
B.S. - BDD: Avaliação e Proposta de Aplicação no Pós Desenvolvimento — Jan 2011

Arthur Moreira Maia — Federal University of Lavras (UFLA) — Brazil
B.S. - Modelagem da Estrutura e Dinâmicas de Redes Sociais: Um Modelo Formal para Estudos de Fenômenos Sociodinâmicos — Jan 2020
- Undergraduate research (Iniciação Científica) — CNPq

Aline Rodrigues Guimarães de Oliveira — Federal University of Lavras (UFLA) — Brazil
B.S. - Modelagem e Simulação de Difusão de Informação em Redes Sociais — Jan 2019
- Undergraduate research (Iniciação Científica) — CNPq

Álvaro Martins Espíndola — Federal University of Lavras (UFLA) — Brazil
B.S. - Uso de Modelagem Baseada em Agentes para Redução de Oportunidade para Agentes Criminosos na Cidade de Lavras — Jan 2019
- Undergraduate research (Iniciação Científica)

Leonardo Amorim de Sena — Federal University of Lavras (UFLA) — Brazil
B.S. - Desenvolvimento e Análise de Plataforma para Estudos sobre Contágio em Redes Sociais — Jan 2019
- Undergraduate research (Iniciação Científica)

Arthur Moreira Maia — Federal University of Lavras (UFLA) — Brazil
B.S. - Modelagem e Simulação de Difusão de Informação em Redes Sociais — Jan 2019
- Undergraduate research (Iniciação Científica) — CNPq

Danielle Aparecida Alcântara — Federal University of Lavras (UFLA) — Brazil
B.S. - Webometria e Análise de Valor na Web — Jan 2013
- Undergraduate research (Iniciação Científica)

Ana Carolina Le Senechal — Federal University of Lavras (UFLA) — Brazil
B.S. - Validação do Modelo Matemático para a Análise do Comportamento do Protocolo TCP em Redes Assimétricas — Jan 2011
- Undergraduate research (Iniciação Científica)

Yasmin Ribeiro Penha — Federal University of Lavras (UFLA) — Brazil
B.S. - Estudo de Algoritmos para Mineração de Opinião para Detecção das Percepções sobre a Cidade de Lavras — Jan 2011
- Undergraduate research (Iniciação Científica)

Ian Hawthorne, Nathan Holtrop — Calvin University
B.S. - Teaching Ancient Wisdom with Modern AI: Evaluating LLMs in Early Christian Studies — Summer 2026
- McGregor Undergraduate Research Fellowship

Caleb Ausema — Calvin University
B.S. - Agent-Based Modeling for Archaeology — Spring 2026 - Fall 2026
- Senior Project

Martin Liu — Calvin University
B.S. - VerseNet: A Visual Neo4j-Based Bible Knowledge Network — Spring 2026 - Fall 2026
- Senior Project
